## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-2 and 4-5 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by US Patent 6734935 ("935").

935 teaches liquid crystal display device, comprising: a first substrate; a second substrate [310,160]; a liquid crystal layer sandwiched between the first substrate and the second substrate [60]; transmissive display areas through which light incident from an outer surface of the first substrate is transmitted to perform transmissive display [291]; reflective display areas from which light incident from an outer surface of the second substrate is reflected to perform reflective display [290]; a reflective film disposed in the reflective display areas [290]; and a thickness-adjusting layer to adjust a thickness of the liquid crystal layer, disposed on an inner surface of at least one of the first substrate and the second substrate [360], such that the liquid crystal layer is thinner in the reflective display areas than in the transmissive areas, an edge portion of the reflective film lying in a boundary area between the transmissive display area and the reflective display area, the edge portion having an upper surface serving as a mirror reflective surface [see tapered boundary and 363].

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2871

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over 935.

935 teaches the liquid crystal display device according to claim 1, but lacks the reflective film including a light-scattering device to scatter reflected light, except on the part serving as the mirror reflective surface. However, it was well known to provide a reflecting display with a scattering surface to decrease parallax. Accordingly it would have been obvious to one of ordinary skill at the time of invention to combine a scattering surface with 935.
